Assignment 3

Q.1 Write a C++ program to declare private data members and functions inside the class. Also, declare one more public member function for setting values of private data members. Now, access the public member function by creating an object of this class. Finally, display the data members' values using a private member function.

Q.2 Write a C++ language program to accept a float number through the keyboard. Create a class that contains two private data members: a and b. Furthermore, the class contains a public member function that calculates the square of the number and then separates the float number into integer and fractional parts and assigns the value to the private members a and b respectively. Finally, calculate the square of an integer and fractional part and add them to another variable c.

Q.3 A five-digit positive integer is entered through the keyboard, write a C++ Program to calculate sum of digits of the 5-digit number.
