Assignment 4

Q.1 Create a BankAccount class with attributes accountNumber, accountHolder, and balance. Implement methods to deposit and withdraw money. Ensure to display an appropriate message if a withdrawal amount exceeds the available balance.

Q.2 Design a Library class with attributes bookTitle, author, and isAvailable. Include methods to lend and return books. Display appropriate messages based on book availability.

Q.3 Write a C++ language program that creates three classes S1, S2, and S2. The classes have a private data member variable of string data type. Take the input of two strings from the user through the mutator member function of class S1 and S2 respectively. Now, Concatenate the strings of S1 and S2 data members and assign it to the data member variable of class S3. Last use the accessor member function of Class S3 for performing the print task.

Q.4 Write a C++ program to declare a class temp_ture as given below.

```
class temp_ture
{
    private:
        char A1[500],
        A2[500], A3[500],
        A4[500], A5[500];
}
```

Now, declare an array of five objects. Create a mutator and accessor member function for the temp_true class for taking the input of all five-character array data members and displaying the value of each data member of this class respectively. Create two more public member functions for counting the number of vowel and consonants in the five characters' array.
